

Professor Monica Lakhanpaul leads a multi-disciplinary translational research group at UCL, that focuses on Health Services Research which has direct impact on health policy and clinical practice. Her research program aims to take a multi-disciplinary, integrated and collaborative approach to improving outcomes for children. Her research also aims to transform services for patients.

Professor Lakhanpaul's research focuses on the translation of evidence into clinical practice and health policy, drawing together education, primary and secondary research to improve health outcomes for children. Her research crosses primary, community and hospital care, social care and education.

Professor Lakhanpaul's research falls under four main themes; Applied Translation of Evidence In to Policy and Practice (through systematic review, guideline development, decision and prediction rule development), Improvement Science (with a particular focus on partnership production with parents, patients and health professionals; co-production with communities to develop tailored health interventions: MIA study), Conditions (with a specific interest in respiratory illness; asthma, and the acutely sick child) and Inequalities in Health (tailoring interventions for hard to reach groups, health tourism and the use of translators and interpreters to reduce inequalities).
