

Stephanie Taylor is Professor in Public Health and Primary Care. Her research interests include complex interventions, chronic disease management and the self management of chronic conditions.

She has led a number of systematic reviews of quantitative research evidence and is currently involved in a number of clinical trials of complex interventions in the community. She is principal investigator on an NIHR programme grant looking at a novel self management intervention for chronic musculoskeletal pain (COPERS), and co investigator on a large study of the effect of promoting physical activity on depression amongst residents in residential and nursing homes (OPERA).

Stephanie sits on the NICE Public Health Interventions Advisory Committee. She is an expert advisor on self care of non-communicable diseases to the World Health Organisation.
